RESEARCH EXPERIENCE

(Indicated by the corresponding publication or preprint shown in the next section.)

- **Recovery and Robustness Analysis for Model Based Deep Learning**
 - Established theoretical recovery guarantees of *plug-and-play priors* (PnP) for compressive sensing image reconstruction based on monotone operator theory and set-restricted eigenvalue condition (published in [c 5]).
 - Provided robustness analysis for PnP-ADMM on the topic of prior distribution mismatch under nonconvex condition (preprinted in [u 2]). The analysis has been extended to PnP posterior sampling algorithm (preprinted in [u 3]).

• Efficient Optimization Algorithms for Large-scale and Data-intensive Imaging

- Proposed ODER, a first *online deep equilibrium learning* framework with theoretical guarantees for data-intensive imaging modalities that adopts stochastic processing of measurements within an implicit neural network (in [c 4]).
- Improved reconstruction efficiency by providing various scalable optimization algorithms for large-scale imaging, including block-coordinate and asynchronous distributed variants (in [j 11], [c 14], and [c 9]).

• Physics Informed Deep Learning Methods

- Proposed DOLCE, a new conditional diffusion probabilistic model based framework for limited-angle computational tomography (in [c 1]). This work was performed on LLNL HPC with distributed training.
- Provided a *coordinate-based internal learning* (CoIL) method for continuous representation of the measurement field (in [j 5]), inspired by neural representation fields (NeRF).
- Proposed and analyzed SGD-Net as a new methodology for improving the efficiency of deep unfolding through stochastic approximations of the data-consistency layers (in [j 6]).
- Proposed RARE algorithm using deep network as regularizer trained for more general artifact-removal on datasets containing only undersampled measurements (in [j 9]).
- Proposed a novel image reconstruction algorithm (Cal-RED) that enables joint calibration of the measurement operator along with reconstruction of the unknown image (in [c 6]).
