RESEARCH INTERESTS

Computational Imaging, Deep Learning, Signal Processing, Large-scale Optimization, Sparsity and Compressive Sensing.

EDUCATION

Washington University in St. Louis (WUSTL), St. Louis, MO, USA Aug. 2019 – Expected 2024
Ph.D. student in Electrical & Systems Engineering
Advisor: Prof. Ulugbek Kamilov

WUSTL, St. Louis, MO, USA Aug. 2017 – May 2019
M.S. in Electrical & Systems Engineering

University of Electronic Science and Technology of China (UESTC), Chengdu, China Sep. 2013 – Jun. 2017
B.S. in Electronic and Information Engineering
Advisor: Prof. Zhiqin Zhao

WORK EXPERIENCE

Los Alamos National Laboratory (LANL), Los Alamos, NM, USA Jun. 2021 – Aug. 2021
Research Intern
Mentor: Dr. Brendt Wohlberg

AWARDS & HONORS

- WUSTL Dean's Select PhD Fellowship, 2019
- NeurIPS 2019 Travel Award

RESEARCH EXPERIENCE

- **Plug-and-Play priors (PnP)**
 - Established theoretical recovery guarantees for PnP by assuming that the solution of these methods lies near the fixed-points of a deep neural network (i.e. denoisers and artifact remove operators).
 - Studied and provided a practically efficient denoiser scaling technique to explicitly control the amount of PnP regularization (noise level σ).
- **Regularization by Denoising (RED)**
 - Improved RED efficiency by providing various scalable RED algorithms for large-scale image reconstruction, including stochastic, block-coordinate, and asynchronous distributed variants.
 - Proposed a new Calibrated RED (Cal-RED) method that enables joint calibration of the measurement operator along with reconstruction of the unknown image.
- **Model-based Deep Learning for Image Inverse Problem**

- Proposed to considerably improve the performance and stability of deep image prior (DIP) by incorporating traditional total variation (TV) regularization.
- Provided a coordinate-based internal learning (CoIL) method for continuous representation of the measurement field, inspired by neural representation fields (NeRF).
- Proposed and analyzed SGD-Net as a new methodology for improving the efficiency of deep unfolding through stochastic approximations of the data-consistency layers.
- Proposed RARE algorithm to broaden the current denoiser-centric view of RED by considering priors corresponding to networks trained for more general artifact-removal on datasets containing only undersampled measurements.
- Studied and provided a deep learning method for joint accelerated MRI reconstruction and registration without using the ground-truth images.
