# Jiaming Liu

Tel: (+1)314-203-5469 Email: jiaming.liu@wustl.edu Address: 9015 Eager Rd. APT 311,

St. Louis, MO.

Homepage: jiamingliu.github.io

Google Scholar: scholar.google.com/jiaming.liu

# RESEARCH INTERESTS

Computational Imaging, Deep Learning, Signal Processing, Large-scale Optimization, Sparsity and Compressive Sensing.

## **EDUCATION**

# Washington University in St. Louis (WUSTL), St. Louis, MO, USA

Aug. 2019 - Expected 2024

Ph.D. student in Electrical & Systems Engineering

Advisor: Prof. Ulugbek Kamilov

WUSTL, St. Louis, MO, USA

Aug. 2017 – May 2019

M.S. in Electrical & Systems Engineering

# University of Electronic Science and Technology of China (UESTC), Chengdu, China

Sep. 2013 – Jun. 2017

B.S. in Electronic and Information Engineering

Advisor: Prof. Zhiqin Zhao

#### WORK EXPERIENCE

# Lawrence Livermore National Laboratory (LLNL), Livermore, CA, USA

Jun. 2022 - Aug. 2022

Research Intern

Mentor: Dr. Rushil Anirudh

## Los Alamos National Laboratory (LANL), Los Alamos, NM, USA

Jun. 2021 – Aug. 2021

Research Intern

Mentor: Dr. Brendt Wohlberg

## **AWARDS & HONORS**

NeurIPS 2022 Scholar Award, NeurIPS 2019 Travel Award, WUSTL Dean's Select PhD Fellowship, 2019

#### RESEARCH EXPERIENCE

# · Model-based Deep Learning for Image Inverse Problem

- Proposed DOLCE, a new deep model-based framework for limited-angle computational tomography (LACT) that uses a conditional *denoising diffusion probabilistic model* (DDPM) as an image prior.
- Proposed ODER, a first *online deep equilibrium RED* framework for inverse problems that adopts stochastic processing of measurements within an implicit neural network.
- Provided a coordinate-based internal learning (CoIL) method for continuously representation of the measurement filed, inspired by neural representation fields (NeRF).
- Proposed and analyzed SGD-Net as a new methodology for improving the efficiency of deep unfolding through stochastic approximations of the data-consistency layers.
- Proposed RARE algorithm to broaden the current denoiser-centric view of RED by considering priors corresponding
  to networks trained for more general artifact-removal on datasets containing only undersampled measurements.
- Proposed to considerably improve the performance and stability of deep image prior (DIP) by incorporating traditional total variation (TV) regularization.

## • Plug-and-Play priors (PnP) and Regularization by Denoising (RED)

- Established theoretical recovery guarantees for PnP by assuming that the solution of these methods lies near the fixed-points of a deep neural network (i.e. denoisers and artifact removal operators).
- Studied and provided a practically efficient denoiser scaling technique to explicitly control the amount of PnP regularization (noise level  $\sigma$ ).
- Improved RED efficiency by providing various scalable RED algorithms for large-scale image reconstruction, including stochastic, block-coordinate, and asynchronous distributed variants.
- Proposed a new Calibrated RED (Cal-RED) method that enables joint calibration of the measurement operator along with reconstruction of the unknown image.
